Specialists For Every Form of Weakness and

# Diseases of Men Only

To Show Our Ability

## We Never Ask for a Dollar Until Cure Is Effected

We Mean This Statement Emphatically, and It Is for Everybody

# Varicocele, Piles and Rupture

We Guarantee to Cure Any of Them in One Week

The need of a special sanitarium devoted to the treatment of these ailments has long existed in Southern California. Our institution, occupying the entire Wells-Fargo building, is completely equipped for the rapid cure of the diseases of which we make a specialty.

> The comfortable surroundings, trained nurses, and care received from specialists who treat absolutely nothing else, make the cure of these troubles very easy. Unnatural discharges and results of bad treatment of them, blood taints and all forms of weakness a particular s pecialty. Full information cheerfully given, personally or by letter.

Resources Ignored by Capital

RETARDED BY FALSE REPORTS

Troubles---Temperature High but

Sunstroke Is Unknown

YUMA, Ariz., March 27.-Very few people on the coast know that La Fortuna mine, the great property recently purchased by and now paying Charles D. Lane some \$90,000 per morith, is almost in sight of and only 30 miles from Yuma-Yuma the Neglected!

There is not to be found a prominent locality more or less talked about all over the land, and reached by a transcontinental railway, that has been half so completely ignored by investors and enterprise as this same Yuma. Scarecrow reports, which have placed the town, really wonderfully blessed by nature with resources unbounded, in a hole in the ground, usually as hot as hades, the natural march of progress. But the day is at hand when a change must come. Indeed, the handwriting of approaching change is upon the wall of her environments. A few weeks ago a refound with a great vein of gold quartz across its bosom. Samples weighing 600 pounds were brought in; and assays showed an average value of \$2106 per ton, including \$30 in silver. Since then many mining experts have visited the region of this new find, and all fully verify former reports, that H. B. Gleason of Yuma and his partner have located two fabulously rich claims upon a 10-foot ledge, in a dyorite and porphyry formation. The ledge extends from 300 to 500 feet along the surface, and all the tests made indicate an average value of those surface faces of ledge reaching \$2000 or over to the ton. This new discovery is in or beside the Plomos mountain range. The only water there is found in natural reservoirs, soon exhausted. The nearest permanent supply is eight miles distant. A stage line is established, but no stores are yet opened. One must take supplies from Yuma. found with a great vein of gold quartz

Yuma.

It is, like Randsburg, no place for men without means and a proper outfit for protection on the desert. Hay can be obtained at Haines' ranch, thirty-two miles away, and there a small store has also been opened. The famous mountain promontory, Castle Dome, one of the seenic wonders in the semi-circle of mountains which give Yuma its picturesquely beautiful grandeur, is some sixteen miles southewest of the gent new strike.

the ditches connected with two pumping plants nothing has been done. Capital never had another such a chance. Nor will it soon have again.

Yuma has no bank. It has no fine hotel to accommodate the misguided pulmonary unfortunates who in San Diego and other coast points are sinking surely toward the inevitable, when 90 per cent would be cured in a year here. Six or seven general merchandise stores, one lumber yard, some saloons and restaurants, two drug stores and a livery and feed outfit embrace about all there is of the business part of this city—said to contain from 1200 to 1800 white people, besides Indians galore and a big floating population going to and from the mines. There are a custom house, an important weather bureau, a penitentiary and a big Indian school across the river. Besides Yuma'is a county-seat. A nice electric light plant is in operation and the city is abundantly supplied with water. After one is duly acclimated here the climate is healthful and delightful in the extreme. Really the heat in summer is extreme. Really the heat in summer is no more intense than in Phoenix and such a thing as a sunstroke even among people working out in the hot sun the year around was never heard of.

SUMMER HEAT THAT CURES. Dr. Mollar, a leading and skillful physician of Yuma, declares that people suffering with any kind of pulmonary trouble must stay in Yuma through the heat cured. Indeed all old settlers here de-clare this is a fact, established by the ob-servation of long years. It is also freely asserted that no sufferer ever came here strong enough to walk about and stayed through a whole year without being cured. Yuma is proud of this record and believes that some day it will make her the greatest natural sanitarium on earth.

earth.

ABOUT THE LAND GRANT.

The supreme court of the United States will soon decide as to the validity of the title to the 56,000 acres of splendid land adjoining Yuma, which have been practically withheld from settlement for long years because of an old land grant. Three years ago the case was appealed from the United States land courts to the supreme court and a month or so ago it was reached on the calendar, argued and submitted. According to precedent, therefore, a decision may be looked for any day and certainly it will not be delayed later than June next. No matter which way the decision goes the great tract of nearly 50,000 acres, all bottom land and capable of producing almost anything in the way of crops, fruits or berries and grapes to perfection will be thrown open to settlement. Below and adjoining this tract at various points are large bodies of government land subject to homestead entry upon which water from the Colorado river can and will be brought the moment the grant decision is reached. There is, therefore, no such an opening in the west to procure a home as will soon be offered in the vicinity of Yuma. A big rush is expected, and the city and country ought to double or treble the present population in a year. ABOUT THE LAND GRANT.

REPRESENTING YUMA THRIFT REPRESENTING YUMA THRIFT Only 39 years of age, though for twenty years of that period a resident of Yuma, Althee Modesti is easily the leading merchant and most thrifty business man in the city. In fact, his is the most marked and notable character one often meets. Though in active business here since 1877, no one can be found of all the neighborhood to accuse him of unfairness or even suspect him of a single act of dishonesty. And all this time he has made money as rapidly as the more act of dishonesty. And all this time he has made money as rapidly as the more unscrupulous and rapacious, and saved thriftily until, without question, he is the best supplied with resources among the old-time residents of Yuma. He evidently has full faith in the future of the city, for he holds large quantities of real estate, which he is all the while improving. The most modern and elegant of the brick business blocks in the town are his. He occupies a large structure with his own big mercantile establishment, and builds to rent both business and residence structures. He is identified with a building and loap association, and manifests a conservative spirit of progrest that would soon make Yuma a great and flourishing city if half its residents would imitate the example of Althee Modesti.

GOLD MINING PROPERTIES.

kind than B. A. Haraszthy, late chairman of the board of supervisors of Yuma county and for thirty-five years a practical miner. He is associated with Hon, J. H. Carpenter, now and for fifteen years past a member of the territorial legislature. They have listed with them for sale on the most open and favorable terms many choice and available mining properties which some day will yield ample riches at the touch of capital. Mr. Haraszthy has a typical Yuma home, located on a whole block containing four and a half acres, within the city limits and, under irrigation, handsomely productive. This place is on the lowlands near the limits of the city, where the great grant, long in litigation, has its limits. His partner, Mr. Carpenter, is the resident manager in Yuma for the owners of this grant and as such conducts a considerable fruit and alfalfa ranch near by which is in possession of the grant company. They are standards of authority on the values of local real estate and mines in whichs they are so extensively operating. of local real estate and mines in which they are so extensively operating.

WELLS-FARGO'S AGENT.

Yuma was not always the law abiding, peaceful and orderly secure place which it unquestionably is at present. There have been periods during the last quarter of a century when perhaps it deserved the repute now often erroneously attached to it—namely, that of being a bad town— However for the past twenty-six years O. F. Townsend, Wells-Fargo's representative, has been one of the mainstays of integrity and order in Yuma. Aside from his long and tried efficiency as the only express agent in the place, he has served as postmaster and in many other public offices always with honor and ability. He owns choice lots upon the principal street, has 360 acres across the bench of choice bottom land capable of the most wonderful productiveness and ready for settlers with means to improve it. He appreciates the advent of modern development as much as any citizen in Yuma. His family of seven is one of the most interesting and in him and them the advance of the new prosperity which is even now coming to this wonderful but so long neglected locality will find a most able, worthy and effective factor.

A MODEL PRISON WELLS-FARGO'S AGENT.

A MODEL PRISON.

A MODEL PRISON.

When ex-President Cleveland superseded his own appointment of Hughes and made B. J. Franklin governor of Arizona in 1896, Hon. M. J. Nugent, one of the best-known and able residents of Yuma, became superintendent of the territorial prison. Among the clear-headed men of marked executive ability, who have in many ways shaped the territorial destiny of Arizona during the past twenty years, Mr. Nugent has few equals. He has served the people repeatedly with decided fidelity in the legislature. For sox years he was sheriff of this county, and proved perfectly efficient. Several other important territorial offices at one time or another have been filled by him, and in his management of the prison here since the 1st of May last he has demonstrated a fitness, a capability and a clear-headed facilty for reducing expenses rationally, that ought to place him beyond partisan lines. He has taken hoold of the institution as a man might take hold of a big enterprise of his own. Practically he revolutionized the prison service. For instance, formerly they were bringing wood down the Gila river on a raft. Nugent put a boom across the river, threw

instance, formerly they were bringing wood down the Gila river on a raft. Nugent put a boom across the river, threw the wood in, and when it came down on the swift current, had it dragged out and corded up. Many cords of the wood are used to run the prison electric lights and to use for cooking and laundry purposes for nearly 250 men.

Then he set his prisoners to work and leveled a small hill that overlooked the prison walls too closely for prudence, improving the appearance of the prison grounds as well. Nothing has been allowed to fall into decay. The adobe manufacturing business is steadily pushed and good shrewd bargains made for supplies. In brief, in consequence of his management the prison was never in such a thoroughly satisfactory condition nor the prisoners better cared for or more contented and the cost per capital per diem of maintaining the inmates has been reduced from sixty-two cents in 1896 first to 45 cents, and during the last two quarters to 40 cents. No such showing has ever been made, before in this prison or in any other prison in the country

J. Nugent by this record will hardly have to beg the favorable consideration of whomsoever President McKinley chooses in due time to make next governor of Arizona. It goes without saying that Mr. Nugent is prominently and materially identified with the present and future of Yuma, and ever holding out a welcoming hand to the advent

TO THE NEW YUMA FUND. Messrs. Devore & Speese of Yuma are repared to accommodate miners with mines—burros, pack trains, carriages or drays. They have also a stage line running from Tacna to the locality of the late newly-found gold field. Tacna is the nearest point to the new mines.

A TYPICAL YUMA VENTURE.

The only modern, three-story brick lock in Yuma at present is that erected by Col. P. G. Cotter in 1893. It is a han 1-some structure, in the heart of the city. office in one division and the metropoli-tan drug establishment of Dr. Cotter. It tan drug establishment of Dr. Cotter. It is the only store of the sort in the place where as large, fresh and complete a stock of drugs is carried as is usually found in the best cities of the land, and also the only one in which a regularly graduated pharmacist is employed to compound medicines and fill prescriptions. The two upper stories of the block are admirably fitted up for offices.

Dr. Cotter came to Yuma in 1887 as block are admirably fitted up for offices. Dr. Cotter came to Yuma in 1887 as government physician at the Indian school across the river, fresh from hospital practice after graduating from the Albany, N. Y. Medical college. His faith in the future of Yuma was such that upon retiring from his government position he made his home here, entering upon private practice, which has grown large and profitable. His enterprising investment in the big block which has become a positive necessity to the citizens of the place represents the sum of his faith in the bright future of this long misunderstood and neglected city. Thus from the first Dr. Cotter has been a decided factor in the local progress of

a decided factor in the local progress of Yuma in the past, as he is now a most capable and clear-headed exponent of he grand development now at hand.
YUMA'S NEW BIG ICE PLANT YUMA'S NEW BIG ICE PLANT

W. H. Halbert was one of the fortunate original locaters of the great La Fortuna mine near Yuma, now clebrated as the great producer owned by Charles D. Lane. He is one of the first successful miners deriving well-earned gold from the many rich mineral fields in this vicinity to apply his capital towards the establishment in Yuma of a great ice plant, which is so much needed by the residents of the place that it partakes of a public benefaction. Besides, in a place where ice is so much of a necessity it ought to keep right at home all the money that has fiftherto gone to Truckee or out of the territory for an inferior imported article. With Mr. Halbert in this public spirited project Mr. M. L. Pool, for the last three years the efficient and popular recorder of this county, is associated, so the enterprise will be conducted under the firm title of Halbert & Pool, who enjoy the highest possible financial standing among the most reliable firms in the west.

The plant, which has been ordered of the Vulcan Iron works, is one of the most complete and modern, including a Corliss engine and eighty horse-power boiler. Its capacity will be ten tons a day. This will be operated in a new brick building, 40x80 feet, having an added complete cold storage capacity of three car loads. No other establishment preliminary to the immediate rapid expansion and growth of Yuma could, under the circumstances, be better designed to meet present and anticipated early future demands in a city like this, about to forge ahead with great strides.

THE GOLDEN CROSS MINES. W. H. Halbert was one of the fortunat

THE GOLDEN CROSS MINES.

The Golden Cross group of mines, twenty-two miles west of Yuma in San Diego county, Cal., embrace thirty claims and 500 acres of mineral lands. The ore bodies are numerous and immense, but low grade. One 100-staimp mill upon the propenty, fully equipped with all the most modern appliances, is in constant operation. Some 225 men are employed. Another mill of forty stamps is being overhauled and will start up soon. Only three claims are being worked to supply all the ore needed and more, for vast bodies of ore are in sight that might be taken out fast enough to feed another 100 stamps. This property was first taken hold of by the Golden Cross Min-THE GOLDEN CROSS MINES.

ing and Milling company, but bad luck and the vicissitudes of law attending the introduction of a vast mining enterprise compelled the appointment of a receiver, and the court having jurisdiction appointed to that position W. W. Stewart of the well known San Diego firm of W. W. Stewart & Co. Mr. Stewart found the affairs of the former administration in a condition of chaos. By prompt and judicious measures he has restored order and today there is not a better managed big property on the coast. A fire started in the main shaft of the principal mine being worked before his administration has been extinguished and its ravages repaired at the necessary its ravages repaired at the necessary cost of \$26,000, and this has been paid and \$8000 more turned over to the trustees. At present Mr. Stewart has the entire property, mines and reduction works, in the highest degree of effective and economical operation under his personal supervision. The office affairs of the receiver are in the hands of J. Marn expert accountant, and formerly a banker, driven out into this section for his health, and who takes especial interest in the welfare of the company and is a valuable auxiliary aid to the

### DEPOPULATION OF FRANCE A Frenchman's View of the Sub-

The population of France is now defi-nitely known, and as was to be expected, the increase since the last census is in significant compared with that of neigh-boring countries. Is this a sign of weak-ness? Does it mean decadence? We will endeavor to supply an answer to these important questions. There are people who maintain that an increase of popuwho maintain that an increase of population does not always coincide with the richness of a nation, that quality is of more consequence than quantity, and so on. It is certain, however, that from a military point of view—especially as regards Germany—the numerical inferiority of his country cannot but be a source of the deepest anxiety to every patriotic Frenchman. patriotic Frenchman.

patriotic Frenchman.

Let us examine a few of the statistical facts disclosed by the recent enumeration. Rural depopulation is general everywhere, but even in the most prosperous of our towns there is no augmentaous of our towns there is no augmentation worth speaking of. According to
the last London census the number of
inhabitants resident in the British capital was 4,411,270. That is to say about
300,000 less than the whole of Ireland.
The increase during the preceding quinquennium was 200,428. Now let us turn
to Paris. The prospect is by no means
brilliant, notwithstanding the fact that
the totals show an increase of 87,250 inhabitants. As the compilers are care
ful to point out, this result has occurred
in spite of a diminution of natality. It
simply proves once more that the mania
for centralization causes a steady flow
of immigrants from the provinces to the of immigrants from the provinces to the capital. Parsians may sleep in peace. The Seine will always be lined on both sides, even though the people lining it should have no children. The dearth of children in France is due

The dearth of children in France is due to the fact that the French people do not choose to have families. This is proved by the census in the most striking and conclusive manner. The old fable that diminution of population was caused by excessive mortality during infancy can no longer gain credence. It is not the high death rate that is blameworthy, but the low birth rate. Neither can the defective natality be laid to the charge of poverty. The richer a Frenchman is the fewer children he has. This is equally true in town and country. The rich, the educated, the cultured, are the culprits. The census just taken confirms prits. The census just taken confirms the melancholy reflections which were published some time ago by Dr. Bertillon. His assertion that if France was to be repopulated it would be thanks to

to be repopulated it would be thanks to the lower orders is amply sustained. Grenelle heads the list for births, while the Champs-Elysees are at the foot.

Poverty is unquestionably one of the chief causes of dispopulation, but it is far from being the only one. If the birth rate diminishes in the lower stratum of society, poverty might be incriminated; but, unfortunately, the figures point in precisely the opposite direction. Should we not rather blame the decadence of an effete civilization in which refinement is pushed beyond the limits of reason? Maternity is an instinct; it is nature itself. Now there is nothing so hostile to instinct as education which is based essentially on hypocrisy and makes children

actors, teaching them to dissimulate their real thoughts, and, after rapid re-flection, to substitute for them others which may conduce toward politeness, but are destitute of all sincerity. By but are destitute of all sincerity. By dict of alienating man from natural habits education will end in making him a purely artificial creature, unfit for his position and incapable of adding vigor to the race. Women, unsexed by luxury, will develope an increasing dislike to maternity. That will be the opportunity for less civilized peoples to invade us and make slaves of us, until they, too, in their turn, shall become tender and neurotic.—Scalpel.

#### IN THE SUNK LANDS What the Earthquake of 1811 Did in

Two States

There is no stretch of country more gloomy or desolate than that vast territory in Southeast Missouri and Arritory in Southeast Missouri and Arrival and Missouri and Arrival A bottom seemed to have dropped out when the "big shake," as the natives call the earthquake of 1811, occurred. To a novice in woodcraft or swamp naviga-tion, it is a most hazardous undertaking to penetrate far beyond the borders of this wilderness of cypress, elbow brush and other specimens of the lowland trees and tangled vine thickets. It is trees and tangled vine thickets. It is comparatively easy to move about when the cypress monopolizes the swamp, and when the season has been very dry, along in the fall, one can travel dryshod over parts of the great waste. There are numerous lakes, large and small, some of great depth. Most of these areas of open water are dotted with islands, and in many places fallen cypress trees and great black stumps tles, snakes and other reptiles in summer, while in winter the raccoon, otter, mink and muskrat perch upon them to sun themselves in the daytime, and at night they use the logs when in pur-

night they use the logs when in pursuit of prey.

All throughout the sunk land districts are islands from a half to twenty acres in dimensions. The larger ones contain oak, hickory and smaller growths of underbrush, but most of them are covered with small cane, on which deer that find their way into the solitudes feed and fatten.

One of the most remarkable of these islands is known as "Bone island," and

islands is known as "Bone island," covers an area of about six acres. islands is known as "Hone island, and covers an area of about six acres. This island is a rendezvous for professional hunters, and it is rarely that the buzzards are not seen soaring above. It is a desolate, forbidding place, and gets its name from the fact that it is literally covered with bones of animals and birds, from the horse down through natural history to the bones of ducks and geese. Of the latter great heaps of them can be seen at different places. These bleaching bones tell of merciless slaughter of wild game for their pelts and feathers.

It seems strange that men should destroy thousands of ducks and geese just for their plumage and quills. Every year when the weather is too warm to ship game three men, who make "Bone island" their place of abode, kill ducks and geese, strip them of their feathers, and throw the carcasses in heaps for the buzzards to feed upon.

The beautiful wood duck, which rears lits young in the great swamp district,

the buzzards to feed upon.

The beautiful wood duck, which rears its young in the great swamp district, is the first bird to be slaughtered. The feather-hunters begin in August to destroy these birds, and never stop until they mate in the spring. Later in the season, when the big flight of wild fowl moves southward, the slaughter is something unprecedented.

The birds are "potted" in the night, when big guns are used that do deadly work among the flocks, as they rest in the patches of open water. Not far from Bone island there is a ridge on which many oaks grow that are prolific in acorns. There the mallards go to feed in countless numbers. The writer has seen a moving mass fully 100 feet wide and 300 yards long, of ducks in the gray of the morning along this ridge, struggling to secure some of the acorns that fell from the oaks. One of the hunters on the island was laying for a shot, and when his big gun sounded the pandemonium that followed was indescribable. The roar of 10,000 wings and the cries of frightened, squeaking, fleeing game were absolutely startling. The hunter's double gun left thirty-five killed and wounded mallards in the water when the rest had flown. Inside of an hour the ducks had massed again, when forty-seven were added to the thirty-

morning resulted in 105 ducke be killed. At night seventy-five more before the murderous weapon of pot-hunter.—St. Louis Globe-Democ

show itself in great continents and mountains. While we are discussing and diplomatizing, by the steady operation on a tural causes and the superiority of the English-speaking races, that language is becoming dominant in the world.

over vast territories in Asia, it means, that all those distant races of the world should speak each other's lan-

it means, that all those distant races of the world should speak each other's language.

It is a great stumbling-block and a great opportunity. If, they are well guided, it means the rule of good feeling, Christianity and peace. If they are not well guided, it means a perpetual opportunity of taking offence at each other's words and actions, which adds infinitely to the danger and difficulty of their relations with each other. The progress of the English-speaking races is the most marvelous phenomenon of our time. It means a great machinery for the manufacture of the public opinion that is to guide the world. As in all times, there have been two forces that have contested with each other the power of governing the society of men—the official, organized government and the public opinion, by which, more or less, that organized government has always been controlled and influenced. But in our time the organized government is distinctly losing force and the public opinion is distinctly gaining in power; and as that process goes on, more and more important does it become that that public opinion should be rightly guided.

Those whose voices are heard by the English-speaking nations have a tre-

ion should be rightly guided.

Those whose voices are heard by the English-speaking nations have a tremendous power and bear a terrible responsibility. It is with them that the real shaping of the future destinles of the world lies; and if I look back with admiration to the official life in this country of the distinguished ambassador who sits here tonight it is not mainly ration to the official life in this country of the distinguished ambassador who sits here tonight, it is not mainly—though it must ge greatly—for his official distinction and for the work he has done in his office; but in this country he has thrown himself with great zeal and power and indefatigable effort into the duty of presenting American and English opinion to each other, and moulding them in a common and a bleased form. In that he appears to me to have deserved highly, not only of this country and of his own, but of English-speaking races all over the world, and not only that, but of the English-speaking races the world that is to be. If there are no men to take up the torch that he hands down, if no effort is made to present the public opinion of the two nations to each other, to enable them to understand each other, and oversome temporary causes of offence, it may well be that all the power that is given to them will be given to them only for their own destruction and the calamity of the world, and all that force will be utilized in injuring each other; but if, on the other hand, the high standards which he has held forth, the noble sentiments which he has impressed, the unwarying zeal for the public good which he has uniformly displayed—if they can impress themselves on the public opinion of our time, then the growth of the English he has uniformly displayed—it they impress themselves on the public op of our time, then the growth of the lish-speaking races and the vast is ence which they exercise may well more powerful machinery than he isted yet for bringing to us the religioustice and of peace.
